[1] When metallic conductors are installed that extend beyond one building, the circuits are *required* to be protected with UL 497B listed transient protectors with the appropriate voltage ratings for the circuit being protected. When notification appliances are installed outside of a building (e.g. mounted on an exterior wall) and are connected to an interior circuit that may not have transient protection, it is *recommended* that these circuits also be protected with UL 497B listed transient protection with the appropriate voltage ratings for the circuit being protected. Consult applicable codes for further information.

[2] UL only

[3] ULC only

[4] The speaker circuit in these models is not covered as part of this compatibility list. Only the strobe circuit is deemed to be acceptable. For speaker circuit compatibility see the literature where the speaker circuit connection is handled.

\* = the custom color code of the device. For example, a single alpha character to indicate product color and/or lettering.

xxx = a custom color code designator consisting of a 3 digit numeric code.
