

Honeywell Cable is expanding its Category 6 products.

Different jobs require different tools which is why Honeywell Cable is expanding its Category 6 product line to provide you even more future proofing options. In addition to its Catlink 6 Plus, Honeywell will now carry a version that is engineered without a center spline or separator. Continuing to exceed Category 6 specifications, this cable also has a smaller overall diameter permitting more cables per conduit.

Whether you need a deluxe version or just simply a cost-effective Cat 6, Honeywell Cable can provide many solutions to fit your needs. Rely on Honeywell to have the right tool for the job.

Genesis Catlink 6 Plus Exceeds TIA/EIA-568-B.2-1 Requirements For Category 6 and is Tested to 500 MHz

Includes center “spline” for improved cross-talk performance
