#### 1 Command Format

#### 1.1 SMS Command Format

SMS command sent from a mobile phone (SMS modem) to the tracker:

Password,<Command type>,<Command text>

Note: The password has four digits. The default password is **0000**.

• SMS command sent from the tracker to a mobile phone (SMS modem):

1. Reply

 $IMEI, < Command\ type > , OK$ 

2. Location report

SMS header, Date and time, Positioning status, GSM signal strength, Speed, Remaining battery capacity, Map link

SMS example:

Now,110721 16:40,V,12,56Km/h,97%,http://maps.meigps.com/?lat=22.513015&lng=114.057235

Descriptions about SMS data are as follows:

Parameter	Description	Example
SMS header	Indicates the SMS report type. For details, see	Now
	section 1.2 "Event Code and SMS Header."	
Date and time	Format: YYMMDD hh:mm	110721 16:40
	YY indicates year.	
	MM indicates month.	
	DD indicates date.	
	hh indicates hour.	
	mm indicates minute.	
	Decimal	
	Indicates the GPS signal status.	A
Positioning status	A = Valid	
	V = Invalid	
GSM signal strength	Its value ranges from 0 to 31.	12
	Decimal	
	GPRS data can be sent successfully only when the	
	value is more than 16.	
Speed	Unit: km/h	56
	Decimal	
Remaining battery capacity	Indicates the remaining capacity of the built-in	97%
	battery.	
Map link	Indicates the map link with a latitude and longitude.	http://maps.meigps.com/?lat=22.
	You can visit the website through a mobile phone.	513015&l ng=114.057235
	If you cannot visit HTTP websites through a mobile	Latitude: 22.513015
	phone, enter the latitude and longitude in Google	Longitude: 114.057235
	Maps (maps.google.com).	

#### 1.2 Event Code and SMS Header

OBD-related events are numbered from 129.

#### **3 Command Details**

#### 3.1 Real-Time Location Query – A00

SMS Sending	0000,A00
SMS Reply	Now,Date and time,Positioning status,GSM signal strength,Speed,Remaining battery capacity,Map link
Description	Query the tracker location.  For details, see section 1.2 "Event Code and SMS Header."
Applicable Model	All
Example	
SMS Sending	0000,A00
SMS Reply	Now,110721 16:40,V,12,56Km/h,97%,http://maps.meigps.com/?lat=22.513015&lng=114.057235

# 3.2 Track by Time Interval (SMS) – A02

SMS Sending	0000,A02,Interval,Number of reporting times,Target phone number
SMS Reply	IMEI,A02,OK
Description	When the interval is <b>0</b> , the scheduled SMS reporting function is disabled (default).  When the interval is a value ranging from 1 to 65535, set an interval. The unit is minute.  When the number of reporting times is 0, data has being reported (generally for platform positioning).  When the number of reporting times is a value ranging from 1 to 255, set the number of reporting times. When the number of reporting times reaches the preset value, reporting stops.  Target phone number: Data will be sent to the preset phone number at the specific time interval.
Applicable Model	All
Example	
SMS Sending	0000,A02,10,0
SMS Reply	353358017784062,A02,OK  After the above command is run successfully, the preset phone number will receive a

positioning SMS every 10 minutes.
Interval,110721
16:40,V,12,56Km/h,97%,http://maps.meigps.com/?lat=22.513015&lng=114.057235

#### 3.3 Real-Time Longitude and Latitude Query – A10

SMS Sending	0000,A10
SMS Reply	IMEI,Now,<->Latitude,<->Longitude,Date and time, Positioning status,Number of satellites,GSM signal strength,Speed,Direction,Horizontal positioning accuracy,Altitude,Mileage,Run time,,I/O port status,,
Description	Query the tracker location. The reply content is in longitude and latitude format. When A10 is used, if the tracker GPRS function is enabled and parameters are correct, the tracker will send a piece of GPRS location data which type is 34 to the server.  The function is available for users who implement platform tracking using an SMS modem.
Applicable Model	All
Example	
SMS Sending	0000,A10
SMS Reply	353358017784062,Now,22.535888,114.063034,080310161834,A,9,27,30,179,0,15,8890,1346,,00 00,,

#### 3.4 Track by Time Interval (GPRS) – A12

SMS Sending	0000,A12,Interval
SMS Reply	IMEI,A12,OK
Description	Set the GPRS tracking time interval.  The interval is in unit of 10 seconds.  When the interval is <b>0</b> , the scheduled GPRS reporting function is disabled.  The maximum time interval is 65535 x 10 seconds.  Note: If data needs to be sent at a specific time interval after the vehicle starts or stops, the function needs to work with the A15 function. For details, see A15 and A16 commands.
Applicable Model	All
Example	
SMS Sending	0000,A12,6
SMS Reply	353358017784062,A12,OK

#### 3.5 Setting the Direction Change Report Function – A13

SMS Sending	0000,A13,Angle
SMS Reply	IMEI,A13,OK
Description	When the driving angle exceeds the preset value, the tracker will send an SMS about the
	position to the authorized phone number.
	When the angle is <b>0</b> , the direction change report function is disabled (default).

	When the angle is a value ranging from 1 to 359, set the direction change angle.  For the T322X, <b>15</b> is a recommended angle. For other trackers, <b>30</b> is recommended.
Applicable Model	All
Example	
SMS Sending	0000,A13,30
SMS Reply	353358017784062,A13,OK

#### 3.6 Track by Distance - A14

SMS Sending	0000,A14,Distance
SMS Reply	IMEI,A14,OK
Description	When the driving distance is <b>0</b> , the distance tracking function is disabled (default).  When the driving distance is a value ranging from 1 to 4294967295, set the distance.  The unit is meter.  Note: If the GPRS scheduled tracking and distance tracking functions are both set, reporting complies with the "first reach first report" rule and the interval and distance of next report are re-calculated.

# 3.7 Setting the Parking Scheduled Tracking Function – A15

SMS Sending	0000,A15, Interval
SMS Reply	IMEI,A15,OK
Description	The function applies for vehicle trackers. With the function, the number of GPRS messages is reduced, and thus GPRS traffic is saved.  After the A15 function is set, the A16 function is automatically enabled. For details about engine status, see section 3.8 "Enabling the Parking Scheduled Tracking Function – A16."  The interval is in unit of 10 seconds.  When the interval is <b>0</b> , the GPRS scheduled reporting function is disabled.  The maximum interval is 65535 x 10 seconds.

#### 3.9 Enabling or Disabling the RFID Control OUT1 Function (MVT600/T1/T333/T3) - A17

SMS Sending	0000,A17,X
SMS Reply	IMEI,A17,OK
Description	When X is 1, the RFID control OUT1 function is enabled. Ensure that the engine must
	connect to input 3 and the RFID has been authorized.
	When X is <b>0</b> , the RFID control OUT1 function is disabled (default).
	For example, after swiping the authorized RFID card, you must start the engine within
	one minute. If the time expires, you need to swipe the card again to start the engine.
	After that, input 3 has been detecting engine status. When input 3 detects that the
	engine status is ACC ON, the engine is not activated. When input 3 detects that the
	engine is stopped before one minute, swipe the card to start the engine.

	Note: If the function is enabled, OUTPUT1 is activated. For details about how to authorize a RFID, see commands D10–D15.

#### 3.14 Setting a Man Down Alarm - A29

SMS Sending	0000,A29,Switch,Time,Grade,Wait time
SMS Reply	IMEI,A29,OK
Description	1. Switch: indicates the man down alarm detection switch. Value range: 0–1. When the parameter value is <b>1</b> , the man down alarm function is enabled. When the parameter value is <b>0</b> , the man down alarm function is disabled. The default value is <b>0</b> .
	<ol> <li>Time: indicates the buzzing and vibration duration after falling. In this period, you can press any button to clear the alarm, and thus avoid inaccurate alarm information. After the period, an alarm will be generated or a call will be made. The parameter unit is second. Value range: 0–255. Default value: 10.</li> <li>Grade: indicates the man down alarm grade. Its value ranges from 0 to 3 and it is in decimal format. The default value is 1. The smaller the value is, the high probability an alarm is generated.</li> <li>Wait time: indicates the still duration after falling. The parameter unit is second. Value range: 0–65535. The default value is 0. If the still duration after falling exceeds the preset value, a Man Down alarm will be generated.</li> </ol>

	Phone number 1/2/3: Set the phone number to the SOS phone number. When you call
	the tracker by using the phone number, the tracker will reply an SMS with the location
	and send geo-fence alarms and low power alarms.
	When the SOS button is pressed, the tracker will dial phone numbers 1, 2, and 3 in
	sequence. The tracker stops dialing when a phone number responds.
	Note: If no phone numbers are set and commas are remained, phone numbers set
	before will be deleted. In addition, alarm events will be overlapped.

# 3.19 Setting the Smart Sleep Mode – A73

SMS Sending	0000,A73,Sleep level
SMS Reply	IMEI,A73,OK
Description	Set the automatic smart sleep mode when the tracker is idle.
	When the sleep level is <b>0</b> , the sleep mode is disabled (default).
	When the sleep level is 1, the tracker enters the normal sleep mode. The GSM module
	always works, and the GPS module occasionally enters the sleep mode. The tracker
	works 25% longer in the normal sleep mode than that in the normal working mode. The
	mode is not recommended for users who set the scheduled tracking at a short interval.
	In this way, the mode will affect trace integrity.
	When the sleep level is 2, the tracker enters the deep sleep mode. If the tracker is not
	activated after five minutes, the GPS module is stopped, and the GSM module enters
	the sleep mode. If the tracker is activated, the GPS and GSM modules are waken up. A
	heartbeat event occurs only in the deep sleep mode. A heartbeat event is uploaded
	every one hour by default.
	Activation actions include: SOS alarm, low internal/external battery, external power
	status, GPS antenna cutoff alarm, towing alarm, high temperature, low temperature,
	fuel stealing, vehicle stealing, ACC ON, (button) changes on any input port, vibration,
	incoming call, SMS receiving, call, and heartbeat event (The GPS is disabled during
	heartbeat wakeup.).
	Note:
	• The T355 is in deep sleep mode by default. If the tracker is inactive
	(drop/incoming call/SMS/vibration) for 5 minutes, the tracker enters deep sleep
	mode. In this way, a triggering event (drop/incoming call/SMS/vibration) can

	wake the device up, and then the device enters working mode. In deep sleep mode, if there is no triggering event (drop/incoming call/SMS/vibration) within 25 minutes, the device will automatically enter super power-saving mode. In this mode, only a drop or vibration event can wake the device up. GPS and GSM modules can be enabled intelligently based on vehicle driving status, which saves power.  The MT90 can enter sleep mode under vibration, and vibration cannot wake the MT90 up from sleep mode. However, you can use the A19 command to wake up the MT90. By default, you cannot wake the MT90 up by vibration.  After the T322X stops working for 15 minutes, it automatically enters the power-saving sleep mode. In this way, the GPS module does not work, and the T322X does not upload tracking data at a regular interval. Instead, the T322X sends heartbeat data packets about the positioning cease (GPS invalid) to the platform every 60 minutes. The interval for sending heartbeat packets can be changed. If the T322X vibrates, the T322X will be woken up, continue to work normally, and report data including heartbeat packets at a regular interval.  In any condition, you can use an SMS or a GPRS command to disable the sleep mode, and then the tracker exits the sleep mode and returns back to the normal working mode.

# 3.29 Setting the GPRS Time Zone - B36

SMS Sending	0000,B36,GPRS minute
SMS Reply	IMEI,B36,OK
Description	When <b>GPRS minute</b> is <b>0</b> , the time zone is <b>GMT 0</b> (default). The MS02 can automatically
	detect the user time zone, so that the GPRS time zone does not need to be changed.
	Otherwise, inaccurate data occurs.
	When <b>GPRS minute</b> is a value ranging from -720 to 780, set time zones.
Applicable Model	Excluding T355

#### 3.30 Checking the Engine First to Determine Tracker Running Status – B60

SMS Sending	0000,B60,X	
SMS Reply	IMEI,B60,OK	
Description	When <b>X</b> is <b>1</b> , check the engine first to determine whether the tracker is moving or stops.  This prevents static drift.  When <b>X</b> is <b>0</b> , you do not need to check the engine to determine whether the tracker is moving or stops.  The first positive input of the tracker connects to engine detection by default.
